ANATOMY 3 NEUROANATOMY MOCK 4

1- Which is NOT part of the peripheral nervous system?

A- Spinal cord
B- Dorsal root ganglia
C- Cranial nerves
D- Spinal nerves

2- Which glial cells act as the immune cells of the CNS?

A- Astrocytes
B- Microglia
C- Ependymal cells
D- Satellite cells

3- What does the rhombencephalon give?

A- Metencephalon and myelencephalon
B- Mesencephalon only
C- The spinal cord only
D- Telencephalon and diencephalon

4- How much does a cerebral hemisphere pair weigh in the adult?

A- 2500 to 3000 g
B- 25 to 30 g
C- 1200 to 1400 g
D- 300 to 400 g

5- What is the cuneus?

A- The hook of the parahippocampal gyrus
B- The posterior end of the thalamus
C- Part of the insula
D- The 6th occipital gyrus, on the medial surface

6- Where is the internal capsule?

A- Between the thalamus and caudate medially and the lentiform nucleus laterally
B- Above the corpus callosum
C- Outside the claustrum
D- Between the lentiform nucleus and the claustrum

7- In most people the left hemisphere is dominant for:

A- Spatial ability
B- Musical skills
C- Artistic creativity
D- Language

8- What is the main function of the occipital lobe?

A- Touch and pain
B- Planning movement
C- Interpreting vision
D- Hearing

9- What is the role of the lateral geniculate body?

A- Controlling hunger
B- Relaying hearing to the temporal cortex
C- Relaying vision to the occipital cortex
D- Secreting melatonin

10- Which sensation reaches the cortex without thalamic filtering?

A- Hearing
B- Vision
C- Smell
D- Touch

11- Damage to the hypothalamus can cause:

A- Ipsilateral ataxia
B- Loss of fine touch
C- Hemiballismus
D- Hyperthermia or hypothermia

12- A lesion of the subthalamic nucleus causes:

A- Parkinsonian rigidity
B- Hemiballismus
C- Bitemporal hemianopia
D- Diabetes insipidus

13- How is the brainstem joined to the diencephalon?

A- By the transverse fissure of Bichat
B- By the cerebellar peduncles
C- By the interthalamic adhesion
D- By the foramen magnum

14- Where does the oculomotor nerve (III) exit?

A- Between the cerebral peduncles
B- Between the pyramid and olive
C- At the cerebellopontine angle
D- Behind the inferior colliculus

15- What produces the olive?

A- Inferior olivary nucleus
B- Corticospinal tract
C- Nucleus gracilis
D- Hypoglossal nucleus

16- Which artery supplies the brainstem?

A- External carotid artery
B- Basilar artery and its branches
C- Anterior cerebral artery
D- Internal carotid artery

17- What divides the anterior lobe from the posterior lobe of the cerebellum?

A- Posterolateral fissure
B- Horizontal fissure
C- Primary fissure
D- Vallecula

18- The interposed nuclei are:

A- Globose and emboliform
B- Red nucleus and olive
C- Dentate and fastigial
D- Caudate and putamen

19- Which peduncle is the largest input pathway to the cerebellum?

A- Superior
B- None: all are output
C- Inferior
D- Middle

20- Which embryonic layer becomes the grey matter of the cord?

A- Marginal zone
B- Neural crest
C- Mantle zone
D- Ventricular zone

21- How many pairs of cervical spinal nerves are there?

A- 7
B- 8
C- 12
D- 5

22- Which arteries give the radicular branches to the spinal nerve roots?

A- Segmental arteries (cervical, posterior intercostal)
B- The external carotid
C- The basilar artery
D- The anterior cerebral artery

23- The ventral striatum (nucleus accumbens) is considered part of:

A- The pyramidal system
B- The limbic system
C- The cerebellum
D- The visual system

24- Through which part of the brainstem does the cerebral aqueduct pass?

A- Pons
B- Midbrain
C- Medulla
D- Diencephalon

25- What is the cauda equina?

A- Lumbar, sacral and coccygeal roots below the conus medullaris
B- The tapered end of the cord
C- A fibrous thread anchoring the cord
D- The lumbar enlargement

ANSWER KEY

1- A
2- B
3- A
4- C
5- D
6- A
7- D
8- C
9- C
10- C
11- D
12- B
13- A
14- A
15- A
16- B
17- C
18- A
19- D
20- C
21- B
22- A
23- B
24- B
25- A
