ANATOMY 3 NEUROANATOMY MOCK 5

1- What do the dorsal root ganglia contain?

A- Cell bodies of sensory neurons
B- Preganglionic parasympathetic neurons
C- Oligodendrocytes
D- Motor neurons

2- Which glial cells form part of the blood-brain barrier?

A- Astrocytes
B- Schwann cells
C- Microglia
D- Ependymal cells

3- Which flexure helps to thin the roof of the fourth ventricle?

A- Pontine flexure
B- Cervical flexure
C- Mesencephalic flexure
D- Cephalic flexure

4- Which sulcus separates the frontal lobe from the parietal lobe?

A- Central sulcus (Rolando)
B- Lateral sulcus (Sylvius)
C- Parieto-occipital sulcus
D- Calcarine fissure

5- What is the uncus?

A- The hooked anterior end of the parahippocampal gyrus
B- A deep cerebellar nucleus
C- The posterior end of the fornix
D- A part of the corpus callosum

6- What is the centrum semiovale?

A- A deep nucleus
B- A part of the third ventricle
C- White matter above the lateral ventricles and corpus callosum
D- Grey matter of the cortex

7- A lesion of Broca's area mainly affects:

A- Hearing
B- Understanding language
C- Vision
D- Speech production

8- Which lobe holds the sensory strip for touch, pain and temperature?

A- Parietal
B- Frontal
C- Temporal
D- Occipital

9- The medial geniculate body receives auditory information from:

A- The inferior colliculus
B- The superior colliculus
C- The retina
D- The cerebellum

10- Which artery mainly supplies the thalamus?

A- PICA
B- Middle cerebral artery
C- Anterior cerebral artery
D- Posterior cerebral artery

11- The pineal gland belongs to:

A- The thalamus
B- The epithalamus
C- The hypothalamus
D- The subthalamus

12- The subthalamic nucleus is a target of:

A- Transsphenoidal surgery
B- Deep brain stimulation in Parkinson's disease
C- Lumbar puncture
D- Ventriculoperitoneal shunting

13- Which is the smallest part of the brainstem?

A- They are equal
B- Midbrain
C- Pons
D- Medulla oblongata

14- What lies in the basilar groove of the pons?

A- Basilar artery
B- Vertebral artery
C- Pyramid
D- Abducens nerve

15- Where do the pyramids decussate?

A- Upper pons
B- Lower medulla
C- Upper cervical cord
D- Midbrain

16- An alternating syndrome is:

A- Loss of balance on one side
B- A cranial nerve palsy on one side with hemiplegia on the other
C- Loss of vision in both temporal fields
D- Weakness of both legs

17- The great circumferential sulcus of Vicq d'Azyr is:

A- The primary fissure
B- The posterolateral fissure
C- The calcarine fissure
D- The horizontal fissure

18- Which cells are the only output of the cerebellar cortex?

A- Purkinje cells
B- Basket cells
C- Golgi cells
D- Granule cells

19- A lesion of one cerebellar hemisphere causes symptoms:

A- In both legs equally
B- In the face only
C- On the opposite side
D- On the same side

20- The basal plate develops into:

A- Sensory neurons
B- Meninges
C- Motor neurons
D- Dorsal root ganglia

21- The cervical enlargement supplies:

A- The thoracic wall
B- The lower limbs
C- The upper limbs
D- The pelvic organs

22- Which spinal cord function works without the brain?

A- Planning movement
B- Reflex activity
C- Language
D- Conscious perception

23- Where is the extreme capsule?

A- Between the thalamus and lentiform nucleus
B- Above the corpus callosum
C- Between the lentiform nucleus and claustrum
D- Outside the claustrum

24- Where are the respiratory and cardiovascular centres?

A- Thalamus
B- Midbrain
C- Pons
D- Medulla oblongata

25- Which groove of the spinal cord surface is deep?

A- Anterolateral sulcus
B- Anterior median fissure
C- Posterolateral sulcus
D- Posterior median sulcus

ANSWER KEY

1- A
2- A
3- A
4- A
5- A
6- C
7- D
8- A
9- A
10- D
11- B
12- B
13- B
14- A
15- B
16- B
17- D
18- A
19- D
20- C
21- C
22- B
23- D
24- D
25- B
