ANATOMY 3 ENT MOCK 1

1- Check the correct statement(s) about the ear:

A- It lies mostly within the petrous part of the temporal bone
B- It is the organ of hearing and of balance
C- It is divided into two parts: external and internal
D- The middle ear is filled with fluid

2- The concha of the auricle is limited by:

A- The helix below
B- The antitragus below
C- The tragus in front
D- The anthelix behind and above

3- The bony part of the external auditory canal:

A- Presents a narrowing called the isthmus
B- Contains ceruminous glands
C- Is lined by thin skin continuous with the outer layer of the eardrum
D- Forms the inner two thirds (16 mm)

4- The tympanic cavity:

A- Has five bony walls
B- Has a membranous lateral wall formed partly by the tympanic membrane
C- Is a six-sided box
D- Is about 30 mm long

5- The medial (labyrinthine) wall of the tympanic cavity:

A- Separates the tympanic cavity from the internal ear
B- Carries the promontory on its upper level
C- Carries the oval and round windows on its lower level
D- Is divided into two levels by the prominence of the facial canal

6- Which are parts of the malleus?

A- Neck
B- Footplate
C- Manubrium
D- Head

7- The functions of the Eustachian tube include:

A- Conducting sound to the cochlea
B- Protection
C- Drainage
D- Equalising air pressure on both sides of the eardrum

8- The bony labyrinth:

A- Is lined by periosteum
B- Derives from the otic capsule
C- Contains endolymph directly
D- Contains perilymph

9- Regarding the spiral lamina and the scalae:

A- The two scalae communicate at the apex through the helicotrema
B- The two scalae communicate at the basal turn
C- It partly divides the canal into scala vestibuli above and scala tympani below
D- The spiral lamina projects from the modiolus into the cochlear canal

10- Check the correct statement(s) about the vestibule:

A- It is the central ovoid cavity of the bony labyrinth
B- It lies between the cochlea in front and the semicircular canals behind
C- It lies lateral to the middle ear cavity
D- It lies medial to the middle ear cavity

11- By how many openings do the three semicircular canals open into the vestibule?

A- Six
B- Three
C- Five
D- Four

12- The vestibulocochlear nerve (VIII):

A- Gives an anterior branch, the cochlear nerve
B- Divides in the cerebellopontine angle
C- Gives a posterior branch, the vestibular nerve
D- Divides in the internal auditory canal

13- The inner ear has two main functions:

A- Balance
B- Hearing
C- Amplifying sound through the ossicles
D- Equalising air pressure

14- The relations of the larynx:

A- Below: trachea
B- Behind: hypopharynx
C- In front: oesophagus
D- Above: hyoid bone and base of the tongue

15- The epiglottic cartilage:

A- Is shaped like a tennis racket
B- Its laryngeal side is lined with respiratory mucosa
C- Its lingual side faces the laryngeal vestibule
D- Its foot inserts into the angle of the thyroid cartilage by the thyroepiglottic ligament

16- Movements at the crico-arytenoid joint:

A- Tilting of the cricoid tenses the vocal cords
B- Rotation around a vertical axis abducts or adducts the vocal cords
C- Gliding closes or opens the posterior glottis
D- Elevation of the whole larynx

17- Regarding the tension of the vocal cords:

A- The thyro-arytenoid relaxes them
B- The vocalis tenses them
C- The cricothyroid tenses them
D- The posterior crico-arytenoid tenses them

18- The vocal cords:

A- Are two pearly white cords
B- Stretch from the angle of the thyroid cartilage to the arytenoids
C- Unite behind at the thyroid angle
D- Unite in front to form the anterior commissure, attached to the thyroid cartilage

19- The arteries of the larynx:

A- The posteroinferior laryngeal artery comes from the inferior thyroid artery
B- The superior laryngeal artery comes from the inferior thyroid artery
C- The anteroinferior laryngeal artery comes from the superior thyroid artery
D- The superior laryngeal artery comes from the superior thyroid artery

20- Vocal nodules:

A- Are bilateral
B- Form at the junction of the anterior third and posterior two thirds of the cords
C- Form at the posterior commissure
D- Are linked to voice overuse (teachers, singers)

21- The infrahyoid (strap) muscles include:

A- Sternohyoid
B- Omohyoid
C- Mylohyoid
D- Thyrohyoid

22- Each lateral lobe:

A- Is shaped like a triangular pyramid
B- Has an upper pole resting against the thyroid cartilage
C- Has its base at the upper pole
D- Has a lower pole 1 to 2 cm above the sternum

23- The false capsule attaches the thyroid to:

A- The body of the hyoid
B- The oblique lines of the thyroid cartilage
C- The cricoid, through the suspensory ligament of Berry
D- The sternum

24- The left recurrent laryngeal nerve:

A- Has a mediastinal course between the arch and the trachea
B- Arises from the vagus below the aortic arch
C- Runs along the oesotracheal angle
D- Passes in front of the branches of the inferior thyroid artery

25- The inferior thyroid artery:

A- Its posterior branch anastomoses with the superior thyroid artery
B- Comes from the thyrocervical trunk of the subclavian artery
C- Divides into three branches
D- Comes from the external carotid

ANSWER KEY

1- A, B
2- B, C, D
3- A, C, D
4- A, B, C
5- A, C, D
6- A, C, D
7- B, C, D
8- A, B, D
9- A, C, D
10- A, B, D
11- C
12- A, C, D
13- A, B
14- A, B, D
15- A, B, D
16- B, C
17- A, B, C
18- A, B, D
19- A, C, D
20- A, B, D
21- A, B, D
22- A, B, D
23- A, B, C
24- A, B, C
25- A, B, C
