ANATOMY 3 ENT MOCK 4

1- On the lateral surface of the auricle:

A- The antitragus forms the ear lobe
B- The scapha separates the helix from the anthelix
C- The helix lies in front of the tragus
D- The anthelix is a bifid projection concentric to the helix

2- The cartilaginous part of the external auditory canal:

A- Its cartilage continues that of the auricle
B- Contains ceruminous glands
C- Is lined by thin skin without hair
D- Forms the outer third (8 mm)

3- Check the correct statement(s) about the middle ear:

A- It is an air cavity in the thickness of the temporal bone
B- It communicates forward with the oropharynx
C- It is continued behind by the mastoid cells
D- Its central part is the tympanic cavity

4- The pars flaccida of the eardrum:

A- Lies above the lateral process of the malleus
B- Is also called Shrapnell's membrane
C- Is the thickest and most tense part
D- Lacks the fibrous layer, replaced by loose areolar tissue

5- The posterior wall of the tympanic cavity:

A- Has the retrotympanum in its lower part
B- Contains the vertical part of the facial canal
C- Has the aditus ad antrum, connecting it with the mastoid
D- Separates the cavity from the middle cranial fossa

6- Check the correct statement(s) about the Eustachian tube:

A- Its bony part is superior and posterior
B- It is osseocartilaginous
C- It connects the tympanic cavity with the nasopharynx
D- Its cartilaginous part is posterior, near the tympanic cavity

7- The bony labyrinth includes:

A- The utricle
B- The cochlea
C- The vestibule
D- The semicircular canals

8- The modiolus:

A- Is the central bony pillar of the cochlea
B- Has its base at the fundus of the internal acoustic meatus
C- Is shaped like an elongated cone
D- Has its apex pointing towards the internal acoustic meatus

9- The aqueduct of the cochlea:

A- Connects the perilymph with the cerebrospinal fluid
B- Is a narrow canal starting near the basal turn
C- Contains endolymph
D- Opens into the middle ear

10- Regarding the planes and ends of the semicircular canals:

A- The anterior canal lies in a vertical plane
B- The posterior canal lies in a horizontal plane
C- The lateral canal lies in a horizontal plane
D- The anterior and posterior canals join to form the crus commune

11- Check the correct statement(s) about the sensory receptors of the inner ear:

A- The spiral organ of Corti serves hearing
B- The cristae of the semicircular ducts serve kinetic balance
C- Messages from the maculae travel in the cochlear nerve
D- The maculae of the utricle and saccule serve static balance

12- The labyrinthine artery may arise from:

A- The external carotid artery
B- The posterior auricular artery
C- The basilar trunk directly
D- The anterior inferior cerebellar artery

13- Check the correct statement(s) about the larynx as a sphincter:

A- If incompetent, food and fluid may be aspirated into the trachea
B- It stays open during swallowing
C- It guards the inlet of the lower airway
D- Its upward and downward movements help swallowing

14- Check the correct statement(s) about the laryngeal cartilages:

A- The unpaired ones are the thyroid, cricoid and epiglottis
B- The hyoid is one of them
C- The paired ones are the arytenoid, corniculate and cuneiform
D- There are nine

15- The crico-arytenoid joints:

A- Are functionally the most important joints of the larynx
B- Are flat fibrous joints
C- Are elliptical synovial joints
D- Are reinforced by the posterior crico-arytenoid ligament

16- Which muscles adduct the vocal cords?

A- Transverse arytenoid
B- Sternothyroid
C- Lateral crico-arytenoid
D- Posterior crico-arytenoid

17- The extrinsic muscles of the larynx:

A- Thyrohyoid, mylohyoid and digastric elevate the larynx
B- The cricothyroid is one of them
C- Ensure laryngeal mobility, especially in swallowing
D- Sternothyroid, sternohyoid and omohyoid lower it

18- The laryngeal epithelium:

A- Is keratinised on the vocal cords
B- Is non-keratinised stratified squamous on the vocal cords
C- Is squamous on the upper half of the epiglottis
D- Is respiratory type over most of the larynx

19- The voice:

A- Pitch depends mostly on the shape of the supralaryngeal cavities
B- Intensity (dB) depends on subglottic pressure
C- Frequency (Hz) depends on the vibration speed of the vocal folds
D- Intensity depends mainly on the supralaryngeal cavities

20- At which vertebral levels does the thyroid lie?

A- C5 to T1
B- C1 to C3
C- T2 to T4
D- C3 to C4

21- The dimensions of the thyroid:

A- Weight about 300 g
B- Lateral lobes about 6 cm high
C- Isthmus about 1 cm wide and 1.5 cm high
D- About 6 cm wide between the lobes

22- The capsules of the thyroid:

A- The true capsule is a condensation of the gland's fibrous stroma
B- The false capsule comes from the pretracheal fascia
C- The gland is removed without its true capsule
D- The dense venous plexus lies deep to the true capsule

23- The right recurrent laryngeal nerve:

A- Arises below the aortic arch
B- Arises from the vagus at the level of the right subclavian artery
C- Passes under the inferior constrictor of the pharynx
D- Passes in front of the branches of the inferior thyroid artery

24- The superior thyroid artery:

A- Comes from the thyrocervical trunk
B- Ends at the top of the lateral lobe
C- Divides into three branches
D- Is the first branch of the external carotid artery

25- Calcitonin and parathyroid hormone:

A- Calcitonin is secreted by follicular cells
B- Calcitonin is secreted by C cells
C- PTH is hypercalcaemic and hypophosphataemic
D- Calcitonin is hypocalcaemic

ANSWER KEY

1- B, D
2- A, B, D
3- A, C, D
4- A, B, D
5- A, B, C
6- A, B, C
7- B, C, D
8- A, B, C
9- A, B
10- A, C, D
11- A, B, D
12- C, D
13- A, C, D
14- A, C, D
15- A, C, D
16- A, C
17- A, C, D
18- B, C, D
19- A, B, C
20- A
21- B, C, D
22- A, B, D
23- B, C, D
24- B, C, D
25- B, C, D
