ANATOMY 3 NEUROANATOMY MOCK 2

1- What protects the central nervous system?

A- The peripheral nerves
B- Bone, meninges and cerebrospinal fluid
C- Skin and fat only
D- Muscles only

2- Which part of the neuron carries impulses away from the cell body?

A- Nucleus
B- Dendrite
C- Soma
D- Axon

3- Which is an example of white matter?

A- Cerebral cortex
B- Thalamus
C- Basal ganglia
D- Corpus callosum

4- What lies in the infratentorial compartment?

A- Pituitary gland
B- Cerebellum and brainstem
C- Diencephalon
D- Cerebral hemispheres

5- Where is the calcarine fissure?

A- On the medial surface of the occipital lobe
B- On the inferior surface of the cerebellum
C- On the lateral surface of the frontal lobe
D- Between the temporal and parietal lobes

6- The anterior columns of the fornix end in:

A- The amygdala
B- The hippocampus
C- The thalamus
D- The mammillary bodies

7- What does the basal ganglia need at their input nuclei to work properly?

A- Dopamine
B- Glycine
C- Histamine
D- Acetylcholine

8- Where do most corticospinal fibres cross?

A- In the midbrain
B- In the cerebral cortex
C- In the internal capsule
D- In the medulla

9- Which is NOT a part of the diencephalon?

A- Epithalamus
B- Hypothalamus
C- Subthalamus
D- Tectum

10- The medial surface of the thalamus forms:

A- The floor of the lateral ventricle only
B- The roof of the fourth ventricle
C- The floor of the third ventricle
D- The lateral wall of the third ventricle

11- The hypothalamus is divided into:

A- Anterior, medial and lateral thalamus
B- Supraoptic, tuberal and mammillary regions
C- Head, body and tail
D- Molecular, Purkinje and granular layers

12- Low melatonin levels typically lead to:

A- Diabetes insipidus
B- Hemiplegia
C- Mood disorders
D- Deafness

13- Which cranial nerves do NOT arise from the brainstem?

A- Vagus and accessory
B- Facial and vestibulocochlear
C- Trochlear and abducens
D- Olfactory and optic

14- The inferior brachium carries auditory fibres to:

A- The lateral geniculate body
B- The medial geniculate body
C- The cerebellum
D- The superior colliculus

15- What forms the facial colliculus?

A- The superior colliculus
B- The trochlear nucleus
C- The olive
D- Facial nerve fibres looping around the abducens nucleus

16- What is a function of the reticular formation?

A- Hormone secretion
B- Fine touch
C- Arousal and consciousness
D- Vision

17- What is the main role of the cerebellum?

A- Producing CSF
B- Automatic regulation of tone, balance and coordination
C- Relaying sensation
D- Starting voluntary movement

18- What is the arbor vitae?

A- The cerebellar cortex
B- A vein
C- A deep nucleus
D- Branching white matter of the cerebellum

19- PICA is a branch of:

A- The internal carotid artery
B- The vertebral artery
C- The basilar artery
D- The posterior cerebral artery

20- Where does the spinal cord end at birth?

A- S1
B- L1
C- L3
D- Co1

21- How long is the adult spinal cord?

A- 60 to 70 cm
B- 40 to 45 cm
C- 25 to 30 cm
D- 10 to 12 cm

22- What do the anterior horns contain?

A- Sympathetic neurons
B- Motor neurons
C- Sensory neurons of the dorsal roots
D- Ependymal cells only

23- Which horn of the lateral ventricle is the longest and largest?

A- None, all are equal
B- Temporal
C- Occipital
D- Frontal

24- Where does non-communicating hydrocephalus most commonly arise?

A- Cerebral aqueduct
B- Arachnoid granulations
C- Choroid plexus
D- Lumbar cistern

25- Where is CSF mainly absorbed?

A- Central canal
B- Ependyma of the aqueduct
C- Arachnoid granulations into the superior sagittal sinus
D- Choroid plexus

ANSWER KEY

1- B
2- D
3- D
4- B
5- A
6- D
7- A
8- D
9- D
10- D
11- B
12- C
13- D
14- B
15- D
16- C
17- B
18- D
19- B
20- C
21- B
22- B
23- B
24- A
25- C
